

BARC System Architecture

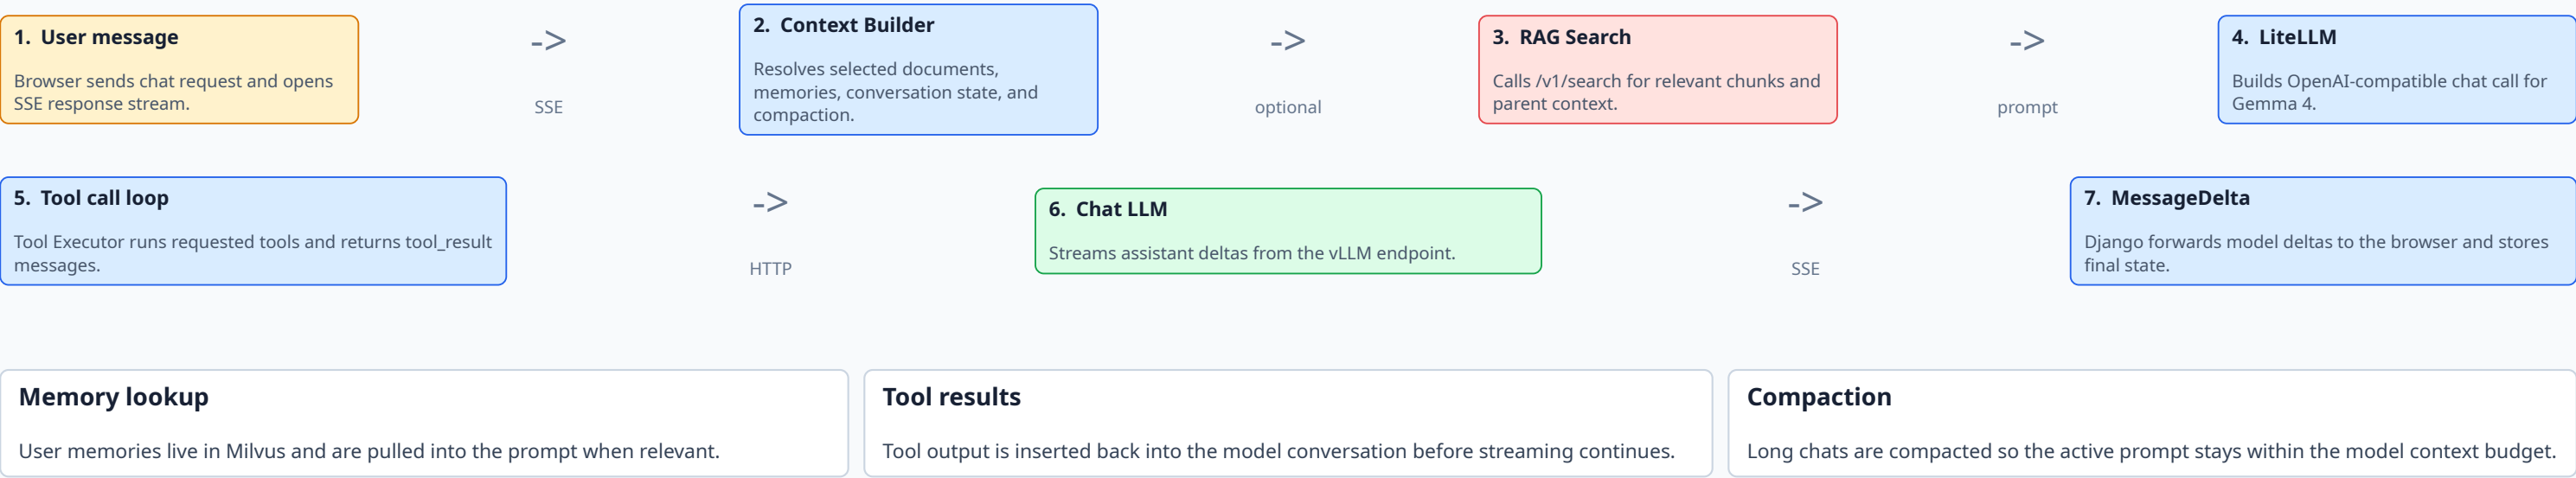

Deployment view for chatbot-service, rag-pipeline, shared storage, and GPU model endpoints.

Cross-service contracts		
Chat stream Browser receives incremental MessageDelta events through Django over HTTP SSE.	RAG delegation chatbot-service delegates document ingest and search to rag-pipeline when RAG_API_ENABLED=true.	Shared state PostgreSQL stores canonical documents and jobs; Milvus stores searchable vectors and user memories.

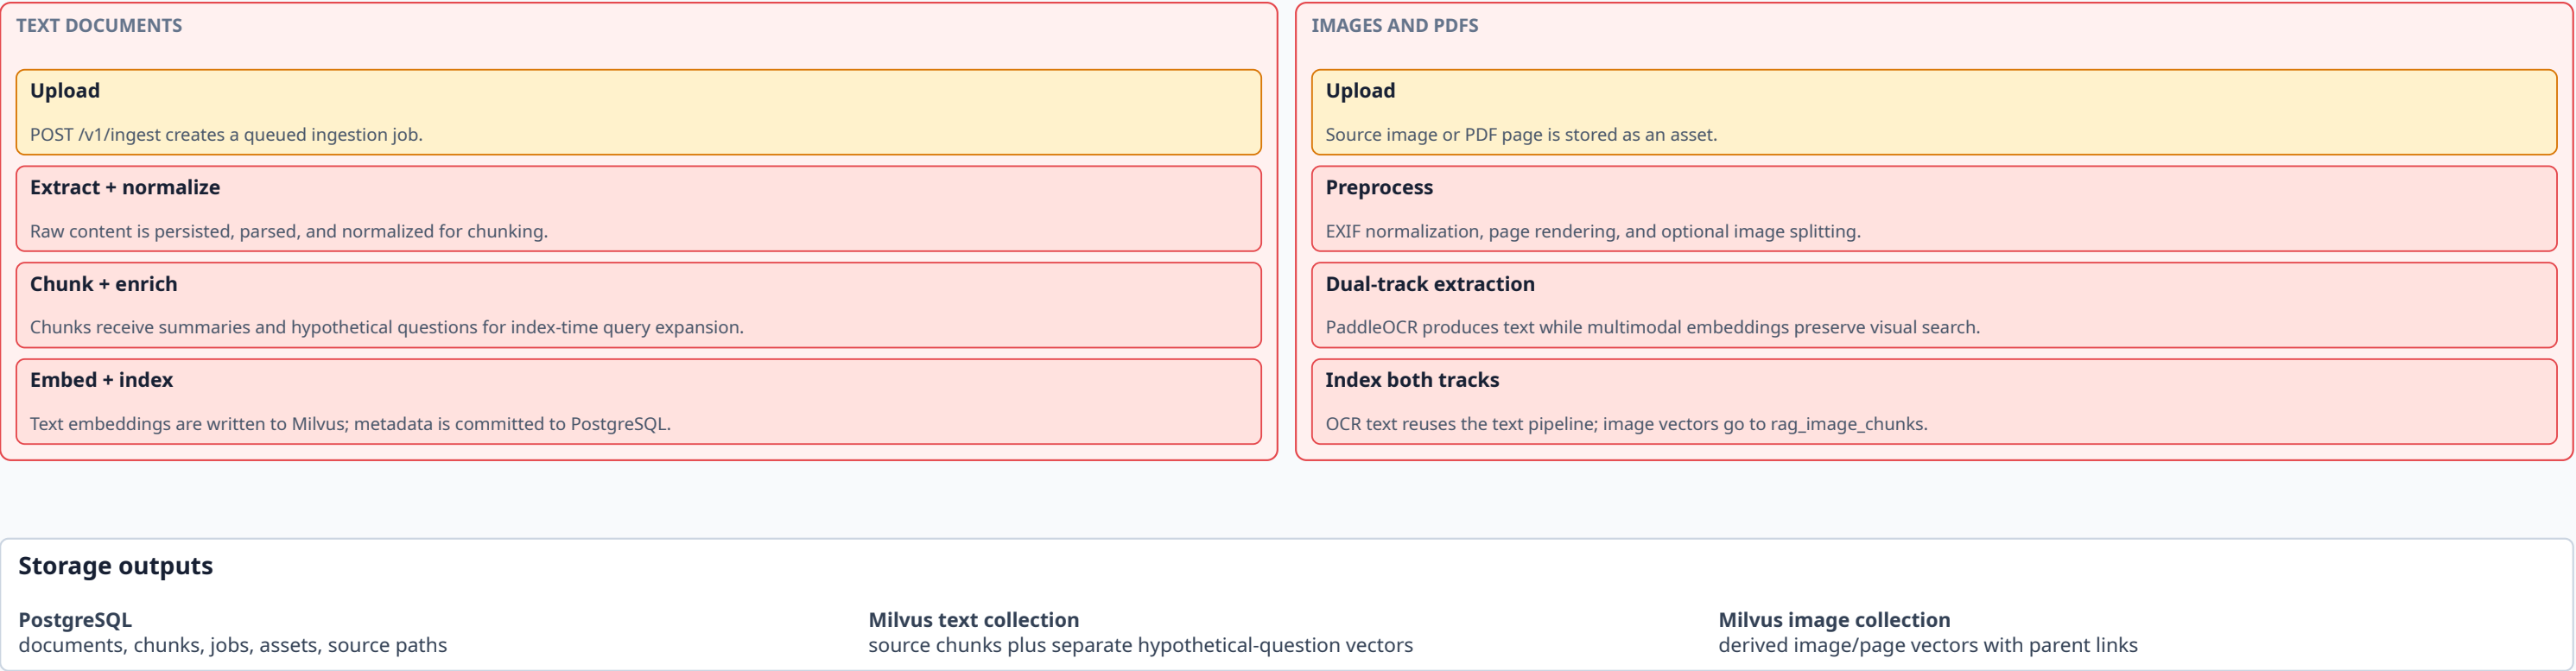

Chat Flow Sequence

Request path for a user message from browser stream to model response.

Document Ingestion Pipeline

How text, PDF, and image inputs become searchable records and vectors.

Retrieval / Search Pipeline

Query enhancement, retrieval, fusion, reranking, and parent-context assembly.
